Your cranes always in view

Stay Connected and in Control

Introducing WOLFF LINK, our advanced **data transmission system, designed specifically for WOLFF cranes**. With live activity monitoring and diagnostics, WOLFF LINK enables efficient management, remote monitoring and optimised operational planning. WOLFF LINK can be accessed from any web browser and any device, allowing you to manage your entire fleet - anytime, anywhere.

Real-time Data

WOLFF LINK automatically collects and stores crane-specific data throughout the working day. The continuous collection and display of up-to-date information brings clear advantages for your construction site management:

- **Safety benefits** through real-time alerts on important parameters such as wind speed, error messages and operating times
- **Quick decisions** thanks to immediate access options and notifications

Reports Overview

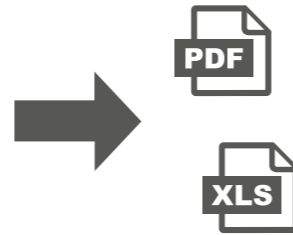

Reports specifically tailored to tower cranes can be generated quickly and easily. They can be exported in PDF or Excel format for a selected time period.

Building Site Logs

- Day logs
- Wind
- Faults

Crane Data

- Operating time
- Load movement
- Switching cycles

Efficient Operational Planning

Enhance your operations and scheduled maintenance planning with WOLFF LINK. With a comprehensive overview of current assignments, detailing their type, location, and duration, your team can efficiently plan ahead, ensuring optimal use of time and resources. Keep your projects on track and maintain peak performance.

Optimal Maintenance Management

Increase the operating time of your cranes with WOLFF LINK's proactive maintenance approach. The system sends automatic reminders for service and maintenance tasks, enabling your team to recognize the need for them early and minimize downtime. Pre-defined profiles that are tailored to different crane types make maintenance management even easier.

With WOLFF LINK, your equipment stays in top condition, the risk of unexpected breakdowns is reduced and your team can keep track of all maintenance tasks – for smooth operations and maximum productivity.

The Advantages of WOLFF LINK

From a service perspective

- Real-time alerts for critical operating conditions
- Optimised economic efficiency of machinery
- Enhanced spare parts planning
- Maintenance planning aligned with machine availability
- Online diagnostic support for on-site personnel
- Automated notifications for service intervals

From a customer's perspective

- Documentation of work assignments
- Reduced downtimes
- Rapid manufacturer support
- Comprehensive fleet management
- Reduced costs through efficient technician deployment
- Reliable planning with real-time overviews

Full list of real-time crane data available

- Wind warnings and statistics
- Warnings and fault messages
- Slewing range
- Operating time
- Load movement
- Switching cycles
- Load torque cycles
- Live view of crane cab display
- Remote settings
- Board map of key technical crane documentation
