WOLFF Assist Bundle

WOLFF Assist

WOLFF Assist is a hands-free support system for crane operators and service technicians using smart glasses. This tool is set to enhance efficiency and reduce costs by minimizing repair time significantly. With multilingual support and voice control, WOLFF Assist is a game-changer in the global construction industry.

Operators or technicians can always work hands-free, which is a considerable advantage in terms of safety and flexibility. The camera transmits the technician's field of vision on the construction site to WOLFF service experts in real time.

WOLFF High Speed Positioning System (WOLFF HiSPS)

WOLFF HiSPS

The new WOLFF High Speed Positioning System revolutionizes the way loads are moved by enabling the crane operator to control the load precisely and without swaying.

Thanks to battery-powered sensors on the trolley and crane hook, the assistance system recognizes the rope movements and automatically adjusts the crane movements. Even loads that are already swaying can be safely stabilized, significantly minimizing the risk of accidents and damage. The anti-collision system is also optimized, as both the crane and the load are automatically halted within the working range limitation.

Benefits of WOLFF HiSPS

- Reliable load stabilization
- Automatic position memory
- Effective stabilization even in windy condition
- Effortless movement of loads and hook-pulling

WOLFF HiSPS can be integrated into numerous WOLFF models in our current product range.
